Jeff:

I am writing this letter to let you know what a pleasure it was to work with you and your company to design, and purchase our new brush truck. I found your company online. I was visiting a fire service publication's website, looking at new deliveries. I saw one of your units and was intrigued by the design. I went to your web site and looked at pictures of the design features. I contacted you by phone. You sent me an information package in the mail. I spoke with several departments that had your units in service. Some people may have reservations about purchasing a vehicle via the telephone, e-mail, internet, or mail, but after several of our telephone conversations, I had complete confidence in you and your company to build the vehicle to the specifications we finalized by mail. I didn't visit your facility or see one of your vehicles in person until we took delivery of ours. I figured since you're a firefighter and built Monster Trucks, we were in good hands. We purchased the chassis from our local dealer at the NJ state contract price. The chassis was shipped from the factory to your local dealer. This saved us thousands of dollars. The rear seats are a great idea. Firefighters are seat belted in and under a roll cage. Also, to enter and exit the seat was only about a 12 inch step to the ground. These safe and practical features were a major factor in our company's decision to purchase your vehicle. We have several areas with hills we have to climb to access the fire. If the vehicle was to roll over, I am quite certain the rear seats will save someone's life. I would just like to say that the members of Pennsville Fire & Rescue CO. 1 are very pleased with our Wild Fire Brush Truck. If any perspective buyers would like to talk to me about our vehicle or our experience with your company, please feel free to give them my contact information.

Thank you,

Charles Kidwell
Deputy Chief
